# AlphaZymePlus™

Bio-Active Odor Counter actant & Enzyme based Cleaner  
For cages, runs, floors, drains, and room deodorizing

## FOR ANIMAL CARE FACILITIES

AlphaZymePlus is a biodegradable, enzyme-based odor counter actant and cleaner combined in a stabilized bacterial spore system for breaking down organic waste and eliminating odors in Veterinary Clinics and Animal Care Facilities. It breaks down and removes dried-on fecal debris, urine, blood, tissue, mucous, and proteinaceous materials completely and effectively. This intelligently bio-active and environmentally safe process allows stabilized bacterial spores to produce fat and starch-splitting enzymes that work on organic debris, reducing it to an odor free solution of CO<sub>2</sub> and water.

**EFFECTIVE ENZYMATIC ACTION - (Formulated for Veterinary Clinics and Animal Care Facilities)** AlphaZymePlus is a bio-active enzyme-based odor counter actant and cleaner for cages, runs, floors, drains, and room deodorizing. The timed-release bio-active protease enzymes in AlphaZymePlus are especially effective in the removal of protein, blood, mucus, feces, and urine; from cages, runs, floors, drains, and other odor producing areas in your facility. Available as a concentrate or as a ready-to-use formulation!

**LONG ACTING** - AlphaZymePlus acts within minutes to eliminate odors through its patent pending powerful odor counter actant and continues working as its intelligent bio-active stabilized bacterial spores produce just the right amount of odor eating enzyme to remove the cause of the odors providing long term control.

**MANY USES** - A superior product to break down organic waste and associated odors. May be used on cages and other animal accommodations where odor producing debris builds up making cleaning and appropriate disinfection difficult to manage. AlphaZymePlus may be used on cat litter to control odors, is especially effective against the odor of TOMCAT SPRAY, and may also be used for blood, urine, and fecal stain removal from clothing, uniforms, rugs, and pet bedding. AlphaZymePlus is also an outstanding choice for use as a room spray air freshener containing a fresh black cherry fragrance, eliminating odors at their source.

**SAFE** - AlphaZymePlus is easily measured and dispensed, absolutely harmless to humans and animals, and will not produce hazardous dust or harm soft metals, including aluminum. AlphaZymePlus is totally organic with no deleterious ingredients, has a near neutral pH, and is biodegradable.

**CONVENIENT SIZE** - AlphaZymePlus is available as a concentrate in ½ gallon containers packaged 3 to a case and 2 ½ gallon containers, and is available as a ready-to-use formulation in 24 oz bottles with sprayers packages 6 to a case and 4 oz sprayers packaged 12 to a case.

**DIRECTIONS FOR USE** - Shake well before using. AlphaZymePlus works best when allowed to work uninterrupted in a moist environment. For cages and other animal accommodations use 1 part AlphaZyme Plus to 4 parts lukewarm water around (170 degrees). For optimal use on heavily soiled areas apply solution and allow to air dry over a 4 hour period prior to disinfecting. May also be used following disinfection to provide long term odor control - simply apply and allow to air dry. For vomitus, urine, TOMCAT spray, cat litter, room deodorizing, and stain removal, a more concentrated solution as needed may be used to dissipate odors immediately, breaking down offending odor producing substrates to CO<sub>2</sub> and water. Repeat as needed. The use of ammonia or vinegar prior to using AlphaZymePlus will greatly diminish its effectiveness. The ready-to-use formulation needs no mixing!

**IMPORTANT NOTE** - AlphaZymePlus is *not a sterilant or disinfectant* and is intended to be used as a supplement to the normal cleaning and disinfection routine of Animal Care Facilities. AlphaZymePlus may be used as often as needed to control stains and odors associated with organic debris. For normal cleaning and disinfection of Animal Care Facilities we highly recommend the use of **KenelSol® Disinfectant** as may be needed, and **Alpha Bio-Drain** for drain maintenance.
