

**Modernize your air quality and surface disinfection programs with ByoPlanet biosecurity systems.**

ByoPlanet electrostatic sprayers provide effective **odor elimination and thorough disinfection of hard surfaces**, promoting a healthy and productive indoor environment. ByoPlanet has the industry's only Air Atomizing Induction Charging (AAIC) technology **allowing disinfectants to disperse uniformly and reduce airborne particulates and evenly coat any hard surface.**

**To address the labor shortage issue, these systems are 73% faster than traditional manual wiping methods.**

## EQUIPMENT OVERVIEW

### ByoPro™

Mobile cart system designed with the end user in mind. The cart offers unlimited operating time and portability throughout multiple spaces. The ByoPro™ is the perfect choice for establishments with high square footage where continuous use is necessary.

### ByoPack™

Backpack corded system designed for unlimited run time both indoors and outdoors in any environment. This model is the user's choice with ergonomic back support and comfort. The ByoPack™ is the perfect choice for mobility across environments with different types or uneven floor surfaces.

### JetPack

Our celebrated backpack battery-operated sprayer is a versatile device offering complete mobility and broad area coverage. This model is many user's preferred choice because it provides extended battery run time and maximum area coverage. The JetPack is the perfect choice for ultimate mobility throughout multiple spaces with different types or uneven floor surfaces.

### Jet H2 Ultra

Jet Ultra handheld is a portable, battery-operated spraying device with plenty of power in a compact design. This model is ideal for confined or smaller spaces such as vehicles, restrooms, locker rooms, fitness areas, and more. The Jet Ultra is the perfect choice for users looking for on-the-go air quality, odor control, and surface disinfection in indoor spaces or outdoor environments.

## CHEMISTRY OVERVIEW

**Pairing the right chemistry with electrostatic sprayers is important for achieving healthy air quality and effective surface disinfection or sanitization.**

Unlike traditional disinfectants that use harsh chemicals, Clean Republic's electrochemically activated solution works by creating hypochlorous acid (HOCl), an effective disinfectant that is safe for humans, pets/animals, plants, and the environment.

There is no need to evacuate or wait for the room to air out after each application. Clean Republic chemistry solution breaks down quickly into water and salt, leaving no harmful residue behind. **Clean Republic Disinfectant kills up to 99.999% of many viruses and bacteria and is effective against a broad spectrum of pathogens.**
