

Astounding Third Party Results by CCGHC.

PART 1 Environment

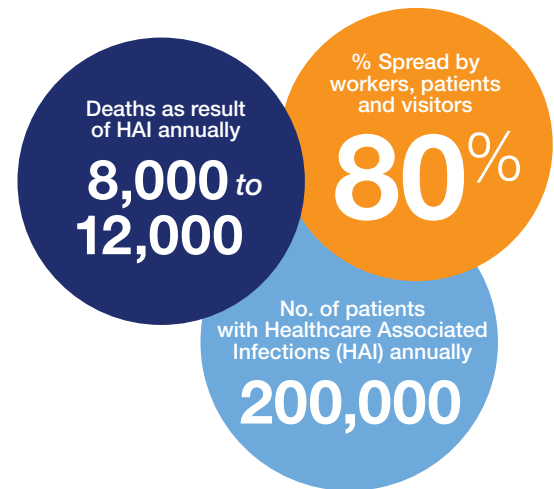

PART 2 HEALTH

PART 3 Financial

In a two-year study at a Vancouver acute care hospital and coordinated by the Canadian Coalition for Green Health Care (CCGHC) as part of the *Safer Chemicals Project*, a major Canadian health system has identified significant **quantitative health benefits** when changing from traditional chemical-based cleaning products to **SAO™ (Stabilized Aqueous Ozone)**.

The study noted that the transmission of Hospital Acquired Infections (HAIs) can be reduced when implementing Tersano SAO System. The study's conclusion is that healthcare organizations making the switch can claim *Green Cleaning Status and Level 1 Commitment under the Healthier Hospitals Safer Chemicals framework*.*

THE CRITICAL IMPORTANCE OF CLEANING TO A HEALTHCARE ORGANIZATION

THE STUDY SHOWED CLEAR HEALTH BENEFITS OF SWITCHING FROM TRADITIONAL CHEMICAL CLEANERS TO SAO™:

100% ↓
 Reduction in Skin Contact Irritants, Redness & Burning

100% ↓
 Reduction in Inhalation Irritation, Respiratory Corrosion, Breathing Interruption

99.999% ↓
 Elimination of Germs Harmful To Health

38-84% ↓
 Reduction in Slip & Falls
